

1. Introduction

Some tips for making the assembly easier.

Written By: Dozuki System

Step 1 — Original Prusa i3 MK2 vs MK2S

- Take a look at the aluminium frame (Z axis), there is a sticker with the name of the printer. In case of a text **"Original Prusa i3 MK2S"** you need to use another version of this manual - [Original Prusa i3 MK2S kit assembly v2.0](#)
- If your sticker contains **"Original Prusa i3 MK2"** you can continue using this manual.

Step 2 — All the required tools are included

- ① No soldering is required.
- ① No wire crimping is required.

Step 3 — Labels guide

- All the boxes and bags including parts for build are labeled.
- Number (or numbers) in the header tells you for which chapter you'll need that bag (or box).

Step 4 — Critical parts include spares back-up

- Critical parts, like zipties, have a spare included as a back-up option. How much we included as spare is written in the bracket.
- No need to worry if you mess up during the assembly with the extras added.

Step 5 — Use labels for reference

- i** Most of the labels are scaled 1:1 and can be used to identify the part :-)

Step 6 — Spare bag

- Every type of fastener is included in a separate special bag.
- i** If you lose a screw when building, use one from this bag.

Step 7 — Nut insertion tip

i If you're experiencing troubles with getting nuts into correct places, just follow these simple steps.

- Screw M3 nut a bit on some long screw (M3x40 from Extruder bag works in most cases).
- Push the screw with the nut into the hole where it is supposed to be.
- Grab the screw with pliers and gently hammer the nut in place using a wrench.

i If you use a screw from a different bag then you are using at the moment, don't forget to return it back into the bag.

Step 8 — View high resolution images

i When you browse the guide on <http://manual.prusa3d.com>, you can view the original images in high resolution for clarity.

- Just hover your cursor over the image and click the Magnifier button ("View original") in the top left corner.
- You can start by assembling Y-axis in the next chapter - [2. Y-axis assembly](#)
